- Confined space rescue

Talk to the team to create your own training package.

Due to the high demand of onsite training, we have developed an Australian first - Confined space and Work at heights Mobile Training Unit, bringing our clients the most realistic and interactive training any training organisation can offer.

Key benefits:

- Cost saving: Minimise staff being offsite, and group training discounts always apply!
- Minimal disruption: The time your staff are away from site is minimised
- Rapid set up: Fully self-contained unit, with approx. 15 minutes setup time.
- Training experience: We guarantee your staff will experience the best onsite confined space training available

What to expect:

- The confined space simulator is made up of 2 x separate compartments, including a multi-level maze with approx. 30 m of tunnels.
- A range of different lighting options, sound effects and training smoke can be applied to enhance the training experience.
- Multiple access points including horizontal entry, 2 x vertical entry points utilising a selection of entry equipment such as: Ladders, davits, tripods, winches, pulley systems, fall arrest systems etc.
- Live video feed to give trainers realtime supervision to ensure all learners are comfortable and safe also allowing other learners to view as an additional training aid.
- All equipment is of the highest standard and provided to each learner.

TRAINING UNIT DIMENSIONS

To use the Mobile Training Unit, it is essential to confirm you have space for it on-site. The unit requires a large, flat area for setup, approximately the size of **4 x standard parking spots**. Ensure there is adequate clearance for the truck to maneuver and park, plus once set up in the training setting, enough height to allow for the handrails, davits and tripods to be extended beyond the truck's roofline. It is also important to consider accessibility for participants to enter and exit safely.

If you have any concerns about space or setup, our team is available to assist with planning and logistics.

Dimensions:

Height (for access) 4.3m

Height for training 6.5m

Length 12m

Width 3m

Area required: Length = 15m Width = 6m Height = 6.5m
